# L&T Vyoma and SRIT India Partner to Launch Sovereign Cloud for GovTech, Healthcare & Telecom

**Mumbai, December 24, 2025:** Larsen & Toubro-Vyoma, the AI-ready cloud and hyperscale data centre business vertical of L&T, has entered a strategic partnership with SRIT India Ltd, a Bengaluru-based IT solutions provider with expertise in large-scale e-health, e-governance, telecom and mission-critical systems.

With this collaboration, SRIT will introduce SRIT Cloud, a sovereign, India-localised cloud platform powered by Ministry of Electronics and Information Technology-compliant infrastructure from Vyoma. The solution is designed to meet the stringent requirements of public, joint and private sector entities in areas such as national security, governance, healthcare and telecom — ensuring data sovereignty, high availability and operational trust.

The partnership enables SRIT to offer a fully integrated application-to-infrastructure stack, powered by Vyoma's sovereign cloud and hyperscale capabilities. They will deliver responsive scalability for high-growth digital public services, integrated support across applications and infrastructure, reduced downtime, improved performance for mission-critical systems and faster deployment of SRIT's proven platforms in e-health, urban governance, intelligent transport management system and telecom.

SRIT will make its entire suite of platforms — including its Ayushman Bharat Digital Mission and National Accreditation Board for Hospitals-certified E-Health System — available on a SaaS model, enabling hospitals, clinics, laboratories and government institutions to adopt these solutions at lower cost and complexity.

Similarly, SRIT's flagship GovTech applications — such as automated building plan approvals, municipal governance, fire permit systems and smart transport platforms — will now be offered on SaaS, PaaS and IaaS through SRIT Cloud powered by Vyoma.

**Commenting on the collaboration, Seema Ambastha, Chief Executive – Larsen & Toubro-Vyoma, said:** "This partnership combines our sovereign cloud infrastructure with SRIT's proven expertise in GovTech and HealthTech. Together, we are enabling secure, high-performance cloud services built in India, for India, thus advancing the nation's most critical digital missions".

**Dr Madhu Nambiar, Founder & MD – SRIT India Ltd, added:** "Partnering with Vyoma gives us a sovereign, high-reliability cloud foundation to deliver integrated solutions with assured performance, faster rollouts and proactive risk mitigation — strengthening our ability to serve millions of citizens and thousands of institutions securely and efficiently".

As India accelerates adoption of cloud-based governance, digital health ecosystems and citizen platforms, the Vyoma-SRIT collaboration directly supports three national priorities: data sovereignty, high availability and affordable digital transformation. It establishes one of the most comprehensive application + Infrastructure service models for GovTech and HealthTech in the country.

### About Larsen & Toubro - Vyoma

Larsen & Toubro-Vyoma is L&T's sovereign, secure, and integrated AI cloud and hyperscale data centre business, engineered to deliver AI-ready, high-density compute for India and global enterprises. Built on L&T's legacy of trust, precision and engineering excellence, Vyoma offers sovereign cloud platforms, GPU-as-a-Service, hyperscale colocation and mission-critical digital infrastructure that powers government, BFSI, healthcare, manufacturing and high-compute industries worldwide.
