# Larsen & Toubro Vyoma Partners Open Dhi to Strengthen India's Sovereign Digital Ecosystem

**Mumbai, May 20, 2026:** Larsen & Toubro Vyoma (Vyoma), L&T's sovereign AI cloud and digital infrastructure business, has partnered with Open Dhi Group to host and scale the latter's enterprise and retail technology platforms on secure, India-based infrastructure.

As enterprises accelerate AI adoption, digital transformation and omni-channel commerce, demand for unified, sovereign and cost-efficient digital architecture is rising. The partnership combines Vyoma's sovereign cloud with Open Dhi's enterprise and marketplace platforms, enabling scalable digital ecosystems with assured data residency in India.

Open Dhi will deploy its platforms – DhiERP+ (AI-enabled open-source enterprise ERP), DhiADT+ (Workforce governance and global payroll platform) and Bhaiyaa (Hyperlocal omni-channel marketplace platform) – on Vyoma Cloud within its 'Double Sandwich Technology' architecture, integrating a marketplace layer, AI-led enterprise systems and sovereign cloud infrastructure.

This enables enterprises to improve revenue, optimise cost and strengthen governance, while retaining control over their data. The combined offering provides a unified digital foundation for enterprises to scale operations, improve transparency and manage end-to-end workflows.

Commenting on this, **Seema Ambastha, Chief Executive - Larsen & Toubro Vyoma**, said: "Sovereign and resilient cloud infrastructure will be critical as India advances towards an AI-driven economy. Vyoma provides secure, India-hosted infrastructure to support this transition. Our partnership with Open Dhi will enable enterprises to scale on trusted domestic platforms".

**Shrinivas Racha, Founder, Open Dhi Group**, said: "This partnership ensures our platforms operate on secure sovereign infrastructure built for scale. Our integrated architecture enables enterprises to drive growth, reduce costs and retain control of their digital ecosystems".

The collaboration supports India's push to strengthen domestic digital infrastructure while enabling enterprises to scale in an AI-driven economy.

### **About Larsen & Toubro Vyoma**

Larsen & Toubro Vyoma is L&T's sovereign, secure and integrated AI cloud and hyperscale data centre business, engineered to deliver AI-ready, high-density compute for India and global enterprises. Built on L&T's legacy of trust, precision and engineering excellence, Vyoma offers sovereign cloud platforms, GPU-as-a-Service, hyperscale colocation and mission-critical digital infrastructure that powers government, BFSI, healthcare, manufacturing and high-compute industries worldwide.
